## ABSTRACT:

PURPOSE: To obtain fruits water, containing apple flavor capable of exhibiting specific peaks of retention time in a gas chromatographic chart and acidity with a high K concentration, having moderate apple flavor and useful as various kinds of diluting water.

CONSTITUTION: The above-mentioned fruits water is a concentrated waste liquor of apple fruit juice, i.e., separated water and must contain apple flavor capable of exhibiting three peaks between 5.10-5.80min retention time of a gas chromatographic chart as shown in the figure. The afore-mentioned apple water is so-called natural water and contains much K of 10-600ppm concentration (K content of normal natural water is 2-5ppm) in addition to apple aroma. Thereby, the above-mentioned apple water can be used as drinking water only itself and is extremely suitable as a diluent for alcohols, such as 'SHOCHU' (low-class distilled spirit) or whisker, and capable of imparting positive effects even in aspects of health.
